Art Unit 1713

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

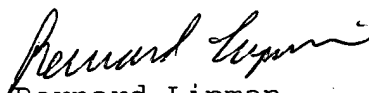

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 35-59 and 69-84 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Gaynor et al., "Controlled Radical Polymerization by Degenerative Transfer: Effect of the Structure of the Transfer Agent".

Reference to Gaynor et al. specifically teaches the functionalization of polymers as required by applicants' claims wherein the R group is a phenylethyl moiety. The polymerization techniques are essentially the same insofar as the free radical

polymerization. The question of whether this moiety contains the characteristics of being a "radical stabilizing group" are presumed to be present since the radical is the same as that being used by applicants. The claimed process is, therefore, either anticipated or rendered prima facie obvious insofar as it is presumed to be the same as that being taught by the reference absent evidence of difference in the process, In re Fitzgerald et al., 205 USPQ 594. The initiator and the monomers of the polymerization process are both specifically disclosed in the reference in its Examples. The introduction teaches the functionalization of the polymers. The claimed processes are, therefore, either anticipated or rendered prima facie obvious from the teaching of reference to Gaynor et al.
